

World-class credentials

30+ Projects Worldwide

Areas of Impact

- Technology selection and plant and equipment layout
- Energy procurement
- Machinery and equipment maintenance
- Managing energy usage in
 - Lighting
 - Compressed air systems
- Electrical and steam systems
- Cooling towers
- Workplace ergonomics
- Materials handling and storage
- Managing peak loads and load shedding
- Managing machinery and equipment start-ups, shut downs and overhauls
- Waste heat systems and sources management
- Matching loads to sources
- Classifying waste and heat quality
- Waste heat storage and reuse
- Review of conditioned spaces for holding material
- Review of conditioned spaces for people, including heating cooling etc.
- Managing energy loading, system operating hours and downtime
